

# This is ABB

---

ABB is one of the world's leading power and automation technology companies. We operate in around 100 countries and employ about 150,000 people.

---

We provide solutions for secure, energy-efficient generation, transmission and distribution of electricity, and for increasing productivity in industrial, commercial and utility operations.

---

Sustainability considerations cover how we design and manufacture products, what we offer customers, how we engage suppliers, how we assess risks and opportunities, and how we behave in the communities where we operate and towards one another, while striving to ensure the health, safety and security of our employees, contractors and others affected by our activities.

---

We are present throughout the entire renewables value chain, from power generation to transmission, distribution and electric mobility.

---

For ABB, sustainability is about balancing economic success, environmental stewardship and social progress to benefit all our stakeholders.

---

We report our sustainability performance according to the Global Reporting Initiative's (GRI) G3.1 Guidelines. Our self-declared level of application of the GRI Guidelines is B. A summary table of numerical performance indicators is included. The indicators in this table have been verified by the independent verification body Det Norske Veritas.
